Keep Your Dog Safe
from Intestinal Parasites

If your dog is at his happiest when he's outside,
you need SAFE-GUARD® (fenbendazole) to protect
him on the inside. SAFE-GUARD treats the 4 major
intestinal worm types common to the outdoor dog.

Treat More Worms

Why settle for less? Treat and control the worms of greatest risk to the outdoor dog.

Using Fewer Drugs

SAFE-GUARD treats all these worms with only one compound, fenbendazole. So you can treat more with less, minimizing your dog's chemical exposure.

With Proven Safety¹

SAFE-GUARD is safe for puppies 6 weeks of age or older and pregnant females as well as adult dogs of all breeds. So it's never too early or too late to start.

Deworm More Effectively: Keep them Safe with Safe-Guard

Find out more about deworming at www.safe-guard-for-dogs.com

¹Data on file.

Consult your veterinarian for assistance in the diagnosis, treatment and control of parasitism.

Approximately 1% of dogs had vomiting associated with the use of this product. Safe-Guard Canine Dewormer has no known interactions and is an ideal complement to monthly heartworm prevention products, which may not protect against all four major types of intestinal worms.
