

## **SAFE-GUARD® CANINE DEWORMER**

### *Product Description*

SAFE-GUARD® (fenbendazole) CANINE DEWORMER is for the treatment and control of Roundworms, Hookworms, Whipworms and *Taenia* Tapeworms in dogs. Safe-Guard® Canine dewormer for dogs treats 4 major intestinal parasites in dogs using only one drug compound, fenbendazole, minimizing your dog's chemical exposure. The daily dose for Safe-Guard® Canine is 50 mg/kg (22.7 mg/lb) of body weight.

### *Product Benefits:*

- Mix the daily dose with a small amount of your dog's usual food. Your dog should eat all of the medicated food. If feeding dry dog food, it may need to be moistened to aid mixing
- Repeat the daily dose for 3 days in a row
- Safe for all dogs 6 weeks and older, including pregnant dogs
- Dogs readily accept Safe-Guard® (fenbendazole) Canine Dewormer. When mixed in food, dogs usually eat it without any problems, which helps to ensure that they receive a complete and proper dosing
- Deworming schedules may vary depending on the climate where you live and the activity of your dog
- Available in 3 sizes: three 1gm packets – each packet treats 10 lbs; three 2gm packets – each packet treats 20 lbs; and three 4gm packets – each packet treats 40 lbs

### **IMPORTANT SAFETY INFORMATION:**

Consult your veterinarian for assistance in the diagnosis, treatment and control of parasitism. Approximately 1% of dogs had vomiting associated with the use of this product.

Safe-Guard® Canine Dewormer has no known interactions and is an ideal complement to monthly heartworm prevention products, which may not protect against all four major types of intestinal worms.
